

LONDON METROPOLITAN UNIVERSITY**PROFESSIONAL WORK PLACEMENT****LEARNING LOG**

ID: 22072035

NAME: Aasmee Rai

COURSE: BSc (Hons) Computing

WRL TUTOR: Nishesh Bishwas

PLACE OF WORK (Company Name): SummitX Pvt. Ltd.

DATES OF ENTRIES IN LEARNING LOG:

Log Index	Start Date	End Date	Company Supervisor Signature
Log 1	21 June, 2024	30 June, 2024	
Log 2	1 July, 2024	10 July, 2024	
Log 3	11 July, 2024	19 July, 2024	
Log 4	21 July, 2024	30 July, 2024	
Log 5	31 July, 2024	9 August, 2024	
Log 6			

LEARNING LOG 1

For the period 21 June, 2024 (start date) to 30 June, 2024 (end date)

What have I done? (relate tasks to Learning Outcomes)

LO1 – Develop research skills

Initially, we conducted thorough research on projects similar to ours. This involved studying their features, user interfaces, and overall approaches. By analyzing these projects, we aimed to gather valuable insights that could guide our own project's development.

LO2 – Communication

We regularly held meetings and discussions to brainstorm ideas and plan our approach. Effective communication within our team played a crucial role in addressing challenges, such as deciding on features and organizing tasks. It ensured that everyone was on the same page and contributed to overcoming hurdles efficiently.

LO3 – Problem Solving

Drawing inspiration from our research, we devised strategies to enhance our project's uniqueness and effectiveness. We identified areas where we could innovate and improve upon existing solutions. This approach not only honed our problem-solving skills but also ensured that our project stood out in the competitive landscape.

LO4 – Team work

When challenges arose, our team's collaborative effort was key to finding solutions. By working together and leveraging each other's strengths, we were able to navigate obstacles and stay aligned with our goals. This collective approach enhanced our ability to address issues and achieve our objectives effectively.

LO5 – Time management

Managing our time effectively was key to our project's success. We established a detailed timeline that outlined deadlines for each phase, including research, planning the app's flow, designing the user interface, and more. This structured approach allowed us to prioritize tasks, allocate resources wisely, and maintain steady progress toward our goals.

What I did well (refer to skills used)

Team working and communication

I worked in a team making plans and researching for a smooth development and progress of our project. I frequently laid out my ideas while also taking my team mates ideas and thoughts into considerations.

What I could improve on (i.e. skills I want to improve)

Communication Skill

While I participated in group discussions, research, and planning, working with many different people was new to me, which made me nervous about actively communicating. As a result, I didn't voice my concerns or share my ideas as confidently as I could have.

Time Management

Although we established a clear timeline, we faced delays because this type of project was new to all of us. Our lack of prior experience created obstacles, making it challenging to complete our tasks on time.

Action I can take to improve my skills and learning (make these “SMART”):**Communication Skill**

Goal – Improve my communication skills and confidently voice my opinions during meetings and group discussions.

Action – Build rapport with other interns and supervisors to feel more comfortable and express my opinions more easily.

Timing – From now, over the next 60 days, until the end of this internship.

Time Management

Goal – Finish tasks on time.

Action – Study similar projects in-depth and gain a better understanding of the topics and the project itself.

Time – From now, over the next 60 days, until the end of this internship.

LEARNING LOG 2

For the period 1 July, 2024 (start date) to 10 July, 2024 (end date)

What have I done? (relate tasks to Learning Outcomes)

LO1 – Develop research skills

I conducted thorough research on existing projects that share similarities with ours, aiming to draw inspiration for the UI design. This involved examining a wide array of websites and apps to gather valuable references.

LO4 – Team work

With a clear vision in mind, we proceeded to meticulously design the UI. This collaborative effort involved constant communication and feedback among team members to ensure the final design aligned with our objectives and met user expectations.

LO6 – Figma

After compiling these insights, our team engaged in detailed discussions regarding the aesthetics and color themes that would best suit our project. We focused on every minute detail to ensure the visual elements were cohesive and appealing.

What I did well (refer to skills used)

Team working and communication

Our project required us to actively communicate and work in a group. We collaboratively researched existing projects, discussed and debated the aesthetics and color themes, and meticulously designed the UI. Constant communication and feedback among team members were crucial in ensuring that our final design was cohesive, visually appealing, and aligned with our objectives.

Design UI

After having a thorough discussion with my team and supervisor, I developed a UI design that balances visual appeal with simplicity. I carefully considered their feedback and requirements to create an interface that is not only aesthetically pleasing but also easy to navigate and understand.

What I could improve on (i.e. skills I want to improve)

Time Management

Meeting the deadline was a significant challenge for me, especially since it was our first time designing a comprehensive app with numerous features. The complexity and scope of the project, with its extensive range of features, added to the difficulty. Despite our best efforts, we narrowly missed the deadline.

Action I can take to improve my skills and learning:

Time Management

Goal – Finish tasks on time.

Action – Develop a comprehensive plan to ensure that I meet deadlines more effectively in the future

Time – From now, over the next 60 days, until the end of this internship.

LEARNING LOG 3

For the period 11 July 2024 (start date) to 19 July 2024 (end date)

What have I done?

LO6 – Figma

We successfully completed the overall UI designs for the project. The design phase involved close collaboration within the team to ensure that all user interface elements were cohesive and aligned with the project's objectives. This strong foundation is guiding the development work.

LO7 – Front-End Development

After completing the design phase, we transitioned into front-end development. Each team member is working on their assigned sections, using the UI designs as a guide. Despite facing some challenges with the code, we are making steady progress toward completing the development phase.

LO3 – Problem Solving

During the front-end development phase, we encountered challenges with the code implementation. These issues required problem-solving and collaboration among team members to find effective solutions. We are actively troubleshooting and working to resolve these difficulties to ensure the project stays on track.

LO4 – Team Work

Our team worked collaboratively to divide responsibilities and tasks effectively. By assigning different parts of the project to each member, we ensured that everyone contributed according to their strengths. This teamwork has been essential in both the design phase and the ongoing front-end development.

What I did well

Front-End Development

While our team worked well through every part of the project, I feel that front-end development was where I contributed the most. Even though we faced some coding challenges, I was able to focus on solving them and making sure the design became a working interface. This phase allowed me to apply my skills effectively and make solid progress in the development.

What I could improve on

Coding

Although front-end development was where I made the strongest contribution this week, it also represents an area where I have significant room for improvement. While I was able to effectively address coding challenges and advance the project, I recognize that enhancing my skills in this area will lead to even better results. Focusing on refining my front-end development capabilities will not only improve my performance but also contribute more effectively to future projects.

Action I can take to improve my skills and learning:

Coding

Goal – Enhance my coding skills to implement more advanced and efficient code

Action – Conduct a thorough review of Flutter documentation and actively practice by working on smaller, related projects.

Time – Henceforth

LEARNING LOG 4

For the period 21 July 2024(start date) to 30 July 2024(end date)

What have I done?

LO3 – Problem Solving

Due to my lack of experience and knowledge, I inevitably encountered various challenges. However, by conducting further research and studying relevant concepts, I was able to overcome many of these obstacles.

LO7 – Frontend Development

After experiencing slow progress the previous week, I decided to dedicate my efforts entirely to frontend development, focusing on my assigned tasks.

LO4 – Time Management

I was tasked with completing my portion of the frontend development this week, and I successfully met the deadline. Despite some challenges, I stayed focused and managed my time effectively to ensure steady progress.

What I did well

Front-End Development

I remained focused on making progress and completing my assigned tasks. Despite facing multiple challenges due to my limited experience, I persevered and successfully contributed to the project.

Time Management

I effectively managed my time, ensuring that I met the deadline for my portion of the project within the given timeframe. By staying organized and prioritizing my tasks, I was able to maintain steady progress and complete my work efficiently. Despite facing some challenges, I remained focused and committed to delivering my part on time.

What I could improve on**Coding**

Although I successfully completed my assigned work and met the required deadlines, I recognize that the overall quality of my code can be significantly improved. There were instances where I encountered challenges due to my limited experience, which may have affected the efficiency and readability of my code. Enhancing my coding skills will not only help me write cleaner and more optimized code but also contribute to the overall performance and maintainability of the project.

Action I can take to improve my skills and learning:**Coding**

Goal – Enhance my coding skills and proficiency.

Action – Work on smaller Flutter projects to gain more hands-on experience.

Time – Henceforth

LEARNING LOG 5

For the period 31 July, 2024(start date) to 9 August, 2024(end date)

What have I done?

LO6 – Figma

Designed new project UIs and refined existing ones to enhance both creativity and design skills. This allowed me to explore different design approaches and improve my proficiency with Figma.

LO7 – Front-End Development

Worked on small projects to sharpen my coding skills and gain more hands-on experience. Focused on developing Flutter projects to strengthen my proficiency and confidence in frontend development.

LO3 – Time management

I effectively met all project deadlines by staying organized and prioritizing tasks based on urgency. This approach ensured steady progress and efficient task completion throughout the week.

What I did well

Front-End Development

By working on several small Flutter projects, I was able to improve my frontend development skills. Each project helped me tackle different challenges and practice new coding techniques. This made me more confident in writing and organizing code, and I became more efficient overall. These projects also gave me a better understanding of Flutter, helping me create better, more reliable apps.

What I could improve on

Coding

Since I primarily focused on frontend development, I realize that my backend development skills are lacking. Expanding my knowledge in backend technologies will help me become a more well-rounded developer.

Action I can take to improve my skills and learning:

Coding

Goal – Strengthen both frontend and backend development skills.

Action – Read documentation, practice backend coding, and work on projects that integrate both frontend and backend.

Time – Henceforth
