

Module Code & Module Title

CS6W50NT Career Development Learning

Assessment Weightage & Type

Individual Coursework (100%)

Year and Semester

2023-24 Spring

Student Name: Aasmee Rai

London Met ID: 22072035

College ID: NP05CP4A220006

Assignment Due Date: June 1, 2025

Assignment Submission Date: June 1, 2025

Academic Supervisor:

Word Count:

I confirm that I understand my coursework needs to be submitted online via Google Classroom under the relevant module page before the deadline for my assignment to be accepted and marked. I am fully aware that late submissions will be treated as non-submission and a mark of zero will be awarded.

Acknowledgement

I would like to express my sincere gratitude to everyone who contributed to my learning journey during the Career Development Learning module. Firstly, I extend my heartfelt thanks to Summit X Group for offering me the opportunity to undertake this internship and gain real-world experience in UI/UX design and frontend development. The professional guidance, constructive feedback, and encouragement I received throughout my placement were invaluable in helping me grow both technically and personally.

A special thank you to Mr. Drona Junga Shrestha, my supervisor at Summit X Group, for his continuous support, mentorship, and trust in my abilities. His insights greatly enhanced my understanding of the design and development process.

I would also like to acknowledge the contributions of my teammates, who made collaboration enjoyable and enriching. Our teamwork enabled us to overcome challenges and deliver results we are proud of.

Lastly, I am grateful to my academic supervisors and the faculty at London Metropolitan University for structuring this module in a way that bridges academic learning with practical experience. This internship has been a transformative step in my career development, and I am truly thankful for the experience.

1. Introduction

1.1. Background of the Placement

During my internship for the Work-Related Learning (WRL) module, I worked at Summit X Group, a creative and design company. They offer many services like branding, graphic design, UI/UX design, web development, marketing design, packaging, and animations. The company helps different types of clients, such as startups, schools, tech companies, healthcare providers, and real estate businesses. (SummitX, 2025)

Summit X Group focuses on creating designs that match the client's brand and goals. They work closely with their clients and follow a clear process from planning and designing to final delivery. Their aim is to deliver high-quality and creative work on time.

1.2. Structure and Role of the Company

The company is divided into different teams such as branding, UI/UX design, web development, and marketing. These teams work together to deliver complete design solutions. Each team is led by experienced professionals who guide the members during projects.

They follow a step-by-step approach: first, they talk to the client, then they research and create ideas, work on the design, take client feedback, and finally deliver the finished work.

1.3. Details of the Specific Department Worked In

I worked in the UI/UX design and frontend development team. Our job was to make sure that websites and apps look good and are easy to use. I helped design user interfaces and also worked on building the frontend of a project.

My tasks included creating wireframes and screen designs, building parts of the website using code, and testing how everything looked and worked. I also got the chance to work with other designers and developers, which helped me learn more about teamwork and real-world development.

2. Review of Activities

2.1. WRL Form

[WRL Form \(Signed\)](#)

2.2. WRL Learning Outcome Review

2.2.1. LO1: Develop research skills

Thorough research was carried out on similar projects to gather insights into their structure, features, and user interfaces. Existing websites and mobile applications were analyzed to identify effective patterns and design choices that could influence the development process. This research contributed significantly to the planning and helped establish a strong foundation for the project's direction and uniqueness.

2.2.2. LO2: Communication

Continuous communication was maintained throughout the project. Regular meetings and brainstorming sessions were held to exchange ideas and align the team on project goals. Although active participation in discussions was initially a challenge due to limited experience, gradual improvements were made by observing others and contributing thoughtfully during team collaborations.

2.2.3. LO3: Problem Solving

Numerous challenges emerged, particularly during the front-end development stage. These obstacles were addressed by conducting further research, reviewing documentation, and seeking peer support. Effective solutions were implemented to overcome issues with coding and user interface behavior, demonstrating growing competence in identifying and resolving technical problems efficiently.

2.2.4. LO4: Team Work

Project responsibilities were divided among team members according to their strengths. Tasks were completed collaboratively, with frequent exchanges of feedback and ideas to ensure alignment. Productive teamwork was instrumental in progressing through each phase of the project, particularly during UI design and front-end development, where collective input led to improved outcomes.

2.2.5. LO5: Time Management

A structured timeline was followed to keep the project on track. Each phase—including research, UI design, and development—was planned with specific deadlines. Despite initial delays due to inexperience, better organization and task prioritization eventually enabled deadlines to be met more consistently. Time was allocated wisely to focus on critical areas and reduce inefficiencies.

2.2.6. LO6: Figma

User interfaces were designed using Figma after detailed discussions about layout, color themes, and aesthetics. Feedback from peers and supervisors was incorporated to refine the visual elements and ensure a user-friendly experience. Further designs were developed and existing ones improved to enhance both creativity and technical proficiency in UI design.

2.2.7. LO7: Frontend Development

Flutter was used to transform the UI designs into functional front-end components. Multiple features were implemented according to assigned responsibilities. Smaller projects were also developed alongside the main tasks to improve coding proficiency and explore different UI-building techniques. Progress in this area was marked by increasing confidence in writing structured and readable code.

2.2.8. LO8: Backend Development

Although direct work on backend development was limited, the importance of backend integration was acknowledged. Plans were made to build skills in this area by studying relevant documentation and working on projects that require backend functionality. Backend development was identified as a key area for future learning to become a more versatile developer.

2.2.9. LO9: API Integration

3. Abilities Evaluation

3.1. LO1: Developing Research Skills

Research skills are essential at the outset of any project, serving as the foundation for informed decision-making and effective planning. A lack of preparation or inadequate research can lead to confusion, delays, and poor outcomes, especially when dealing with unfamiliar technologies or complex requirements. Through involvement in this project, the significance of thorough research became increasingly evident. Valuable insights were gained into how early-stage exploration influences every aspect of development—from design choices to functionality and user experience. As a result, not only was a deeper appreciation for research developed, but the ability to conduct targeted and efficient research was also significantly improved. This experience has reinforced the understanding that strong research skills are a critical asset in any successful project.

3.2. LO2: Communication

Communication proved to be a critical factor in the success of the project, especially during the early stages when key decisions were being made. With team members having different perspectives and levels of experience, regular discussions were essential to align ideas and maintain progress. Although initial interactions were challenging due to unfamiliarity, consistent communication helped build mutual understanding and effective collaboration. This experience highlighted the importance of clear communication and contributed to the development of stronger interpersonal and teamwork skills.

3.3. LO3: Problem Solving

Problem-solving became an essential skill throughout the project, particularly during the development phase when unexpected issues frequently arose. Challenges related to unfamiliar tools, bugs, and implementation setbacks had to be addressed through research, experimentation, and peer support. Each obstacle provided an opportunity to think critically, explore alternative solutions, and improve technical understanding. This continuous problem-

solving process significantly enhanced adaptability and resilience in facing development-related difficulties.

3.4. LO4: Team Work

Teamwork was a central aspect of the project, as collaboration was required at every stage—from planning and design to development and testing. Tasks were distributed based on individual strengths, and regular communication ensured that efforts remained coordinated. Working closely with others helped strengthen collaboration skills, foster a cooperative environment, and improve the ability to adapt to group dynamics. The project demonstrated how effective teamwork can lead to smoother workflows and better outcomes.

3.5. LO5: Time Management

Time management played a crucial role in maintaining steady progress and meeting deadlines. Early challenges with pacing and task estimation were gradually overcome by creating structured plans and prioritizing tasks effectively. Meeting deliverables on time required consistent focus and adaptability, especially when unforeseen delays occurred. Through this experience, the importance of planning ahead, setting realistic goals, and staying organized became clear, resulting in improved efficiency over the course of the project.

3.6. LO6: Figma

Using Figma throughout the internship helped strengthen design skills through practical, hands-on experience. Working on real UI components and receiving feedback improved both technical ability and creative decision-making. This experience enhanced confidence in using design tools and will likely prove valuable in future roles involving UI/UX design or front-end development.

3.7. LO7: Frontend Development

Significant progress was made in frontend development during the internship, particularly through the use of Flutter to build user interfaces based on Figma designs. Real-world challenges such as layout issues, navigation, and responsiveness were addressed, which improved both technical skills and problem-solving abilities. The hands-on experience helped build confidence in writing clean, structured code and strengthened the ability to translate design into functional applications—skills that will be valuable in future development projects.

3.8. LO8: Backend Development

Although the main focus was on frontend tasks, backend development was explored to gain a more complete understanding of full-stack workflows. Time was spent reviewing documentation, learning about server-side logic, and preparing to integrate backend functionality with frontend components. This exposure laid a foundation for further learning and highlighted the importance of backend systems in supporting dynamic, data-driven applications.

3.9. LO9:

4. Challenges

4.1. Team Communication

Effective communication was crucial during the initial stages of the project, as discussions were centered around determining the overall flow and core features. The process proved to be quite challenging, as multiple individuals—some familiar, others meeting for the first time—were involved in making key decisions. With no prior experience of working together, differing opinions naturally emerged. Considerable time and effort were required to reach mutual understanding and arrive at final agreements.

4.2. New Topic and Contents

The development process was notably hindered by the team's unfamiliarity with the chosen framework and programming language. With little to no prior experience, it became necessary to learn the language from the ground up before meaningful progress could be made. Time was invested in studying documentation and tutorials to build foundational knowledge. Although this created an initial slowdown, it ultimately enabled more confident and effective development as the project progressed.

4.3. Time Management

As previously mentioned, the unfamiliarity with the programming language and framework significantly slowed the project's progress. Additional time was required to understand the new technology before development could begin effectively. Beyond the technical challenges, delays also arose from difficulties in making timely decisions regarding the project's structure and features. Differences in opinions and a lack of prior collaboration among team members contributed to prolonged discussions, which further impacted the development timeline.

5. Conclusion

Participating in the Career Development Learning module through my internship at Summit X Group has been a pivotal experience in my academic and professional journey. Throughout the placement, I developed a wide range of skills—most notably in UI/UX design using Figma and frontend development using Flutter. I also strengthened my soft skills, such as communication, problem-solving, teamwork, and time management.

Despite facing challenges like working with new tools and adapting to collaborative workflows, these experiences served as important learning moments. I learned to navigate uncertainties, seek solutions independently, and collaborate effectively with peers.

This internship not only improved my technical proficiency but also provided clarity about my career interests. It confirmed my passion for front-end development and UI/UX design, and motivated me to pursue further learning in backend development and full-stack solutions.

In the future, I plan to continue expanding my technical expertise, take on more complex projects, and build a well-rounded portfolio. This placement has laid a strong foundation for my future endeavors, and I am confident in taking the next steps toward becoming a capable and innovative developer.

Work Related Learning Activity

Start Date: 21th June, 2024

End Date (if known):

Your role at the placement (position): Front End Developer

Brief description of your work at the placement:

I was assigned as a frontend developer, a role in which I also took on the responsibilities of a UI designer. In this capacity, I not only developed the user interface but also designed it, ensuring that both the functionality and aesthetics of the application met the required standards. This dual role involved creating visually appealing and user-friendly designs while simultaneously implementing them into the frontend code, effectively bridging the gap between design and development.

Figure 1: WRL Form (Signed) pt.1

Proposed learning outcomes from the Work Related Learning Activity:

Learning Outcome ID	Learning outcomes	Activities and tasks	Evidence
LO1	Develop research skills	I conducted comprehensive research on existing projects that share similarities with ours, analyzing their design methodologies, user interfaces, and overall effectiveness to gather insights and best practices for our project.	I will provide a detailed screenshot of my research materials, along with a comprehensive list of websites and apps used during the research process. This will include relevant documentation, analysis reports, and references to the specific features and functionalities observed in each source.
LO2	Communication	I will actively engage in group meetings by consistently sharing my insights and opinions to help make meaningful discussions and support effective collaborative decision-making.	I will provide comprehensive documentation of meeting logs, including detailed records of my contributions, key discussion points, and any resulting action items.
LO3	Problem Solving	I will enhance my problem-solving skills by thoroughly analyzing challenges, devising innovative solutions, and tackling issues with a strategic approach.	I will create detailed documentation outlining the problems encountered and the solutions implemented.
LO4	Team Work	I will actively work in collaborative projects, take part in team brainstorming sessions, and help solve any problems cooperatively with my team	I will be providing the pictures/videos of group meetings and presentations.
LO5	Time management	I will use schedule planners to manage tasks efficiently, set deadlines, establish milestones, and create a project timeline to stay on track.	I will provide screenshots of the number of tasks completed on time, project timelines met, or milestones achieved.
LO6	Figma	I will design user interfaces that strike a harmonious balance between aesthetic appeal and functional simplicity, ensuring both an engaging visual experience and intuitive usability.	I will provide detailed screenshots of the UI designs, showcasing various elements and interactions to illustrate how I have balanced aesthetics with functionality.
LO7	Front-End Development	I will create responsive user interfaces using Flutter, integrating frontend components seamlessly with backend services, and optimizing performance to ensure a smooth and efficient user experience.	I will provide access to the GitHub repository along with detailed screenshots of the project, offering a comprehensive view of the code and visual design for thorough review.

Figure 2: WRL Form (Signed) pt.2

LO8	Backend Development	I will study official documentation and online tutorials for Node.js to effectively integrate databases and APIs, applying this knowledge to ensure robust and efficient implementation.	I will provide screenshots of the code and access to GitHub repositories to offer a comprehensive view of the implementation and integration process.
LO9	API Integration	I will incorporate third-party APIs into both Flutter-based frontend and Node.js backend, manage async communications, ensure secure data handling, and improve API efficiency.	I will provide detailed documentation that outlines the implementation and management of API integrations.

7.4. CV (After Internship Included)

[Click here to access CV \(After Internship Included\)](#)

7.5. Evidence

7.5.1. LO1 Evidence

Advanced search filters

Landmark (gym, transport, market, parks), Water facilities, size (room, parking)

Finance support (Sponser, in-app advertisements, listing fees, Property management)

Pop up suggesting home around preferred area which can only be seen as a paid service

AI integration (Personalised Recommendations)

Favourites/wishlist

Virtual tour

Multilingual support

Property categories

Forums and Q&A

Sales Commission

Price Comparison: Tools to compare prices of similar properties in the area.

Reviews and Ratings: Users can rate and review properties and agents/owners.

Property management: Money made and to be collected with be collected forwarded to the landlord

Property Cost Calculators: Custom cost estimation feature that will give users an idea of the total property cost. The calculator should be detailed enough. It should allow users to estimate the final amount based on different factors such as initial payment range, taxes, loan interest amount, and loan repayment schedule.

Figure 6: Research Evidence pt.1

Live location tracking

Sharing in social media

Live tour as premium service

Separate as commercial and residential

Provide chatroom with seller for interested buyer

Customizable notification and alerts

Figure 7: Research Evidence pt.2

User registration and profiles: Allow users to create and manage their profiles.

Property listings: Enable landlords to list properties with detailed descriptions, photos, and videos.

Search and filters: Implement advanced search functionality with filters for location, price range, property type, etc.

Booking and payments: Integrate a secure payment gateway for booking properties and processing payments.

Messaging system: Provide a messaging system for communication between tenants and landlords.

Reviews and ratings: Allow users to review and rate properties and landlords.

Push notifications: Keep users informed about new listings, booking confirmations, and other important updates.

Integrity Flags

0 Integrity Flags for Review

Our system's algorithms look deeply at a document for any inconsistencies that would set it apart from a normal submission. If we notice something strange, we flag it for you to review.

A Flag is not necessarily an indicator of a problem. However, we'd recommend you focus your attention there for further review.
